Sample Cyber Security Multiple Choice Questions and Answers

To provide a practical understanding, here are curated MCQs with detailed explanations:

- Fundamentals of Cybersecurity

Q1: Which of the following is considered the most secure method of data encryption?

- a) Symmetric encryption
- b) Asymmetric encryption
- c) Hashing
- d) Cleartext transmission

Answer: b) Asymmetric encryption

Explanation: Asymmetric encryption uses a pair of keys (public and private) to secure data, making it more secure for transmitting sensitive information over insecure channels. Symmetric encryption, while faster, relies on a shared key, which can be a vulnerability if compromised. Hashing is used for data integrity, not encryption, and cleartext transmission is insecure.

- Network Security

Q2: Which device is primarily used to monitor and analyze network traffic for suspicious activities?

- a) Firewall
- b) Intrusion Detection System (IDS)
- c) Router
- d) Switch

Answer: b) Intrusion Detection System (IDS)

Explanation: An IDS monitors network traffic in real-time to detect and alert administrators of potential malicious activity or policy violations. Firewalls block unauthorized access but do not analyze traffic in as much detail as IDS.

- Cryptography

Q3: Which cryptographic hash function produces a fixed 256-bit output and is commonly used for digital signatures?

- a) MD5
- b) SHA-1
- c) SHA-256
- d) DES

Answer: c) SHA-256

Explanation: SHA-256, part of the SHA-2 family, produces a 256-bit hash and is widely used in digital signatures, certificates, and blockchain technologies due to its security features. MD5 and SHA-1 are considered less secure, and DES is an encryption algorithm, not a hash function.

- Security Policies and Procedures

Q4: Which access control model is based on the concept that permissions are assigned according to the user's role within an organization?

- a) Discretionary Access Control (DAC)
- b) Mandatory Access Control (MAC)
- c) Role-Based Access Control (RBAC)
- d) Attribute-Based Access Control (ABAC)

Answer: c) Role-Based Access Control (RBAC)

Explanation: RBAC assigns permissions based on the user's role, simplifying management and ensuring users have appropriate access levels. DAC assigns permissions at the discretion of the owner, MAC enforces strict policies, and ABAC considers attributes beyond roles.

- Ethical Hacking and Penetration Testing

Q5: Which of the following is a common tool used for network scanning during penetration testing?

- a) Wireshark
- b) Nmap
- c) Metasploit
- d) Burp Suite

Answer: b) Nmap

Explanation: Nmap (Network Mapper) is widely used for discovering hosts and services on a network, making it a fundamental tool for network reconnaissance during penetration testing. Wireshark is a packet analyzer, Metasploit is used for exploitation, and Burp Suite aids in web application testing.
