Mini Case Scenarios in Financial Analysis

Mini case studies simulate real-world situations where financial analysis techniques are applied to solve problems. These cases help learners understand practical applications.

Mini Case 1: Evaluating Liquidity Position

Scenario:

XYZ Corporation reports the following figures:

- Current Assets: \$500,000
- Current Liabilities: \$250,000
- Inventory: \$150,000
- Quick Assets (Cash + Accounts Receivable): \$200,000

Objective:

Calculate the current ratio and quick ratio to evaluate liquidity.

Solution:

- Current Ratio:

$$\text{Current Ratio} = \frac{\text{Current Assets}}{\text{Current Liabilities}} = \frac{500,000}{250,000} = 2.0$$

Interpretation: The company has twice the current assets compared to current liabilities, indicating good liquidity.

- Quick Ratio:

$$\text{Quick Ratio} = \frac{\text{Quick Assets}}{\text{Current Liabilities}} = \frac{200,000}{250,000} = 0.8$$

Interpretation: The quick ratio below 1 suggests potential liquidity concerns without selling inventory.

Mini Case 2: Profitability Analysis

Scenario:

ABC Ltd. reports the following:

- Net Income: \$120,000
- Total Assets: \$1,500,000
- Shareholders' Equity: \$900,000
- Total Revenue: \$1,200,000

Objective:

Calculate Return on Assets (ROA) and Return on Equity (ROE).

Solution:

- ROA:

$$\text{ROA} = \frac{\text{Net Income}}{\text{Total Assets}} = \frac{120,000}{1,500,000} = 8\%$$

Interpretation: The company earns 8 cents for every dollar of assets, indicating efficiency.

- ROE:

$$\text{ROE} = \frac{\text{Net Income}}{\text{Shareholders' Equity}} = \frac{120,000}{900,000} \approx 13.33\%$$

Interpretation: The return generated on shareholders' equity is healthy, reflecting effective management.

Mini Case 3: Debt Analysis

Scenario:

DEF Inc. has the following:

- Total Debt: \$600,000
- Total Equity: \$400,000
- EBIT (Earnings Before Interest and Taxes): \$150,000
- Interest Expense: \$30,000

Objective:

Calculate Debt-to-Equity Ratio and Interest Coverage Ratio.

Solution:

- Debt-to-Equity Ratio:

$$\left[\frac{\text{Total Debt}}{\text{Total Equity}} = \frac{600,000}{400,000} = 1.5 \right]$$

Interpretation: The company has \$1.50 in debt for every dollar of equity, indicating moderate leverage.

- Interest Coverage Ratio:

$$\left[\frac{\text{EBIT}}{\text{Interest Expense}} = \frac{150,000}{30,000} = 5 \right]$$

Interpretation: The company earns five times its interest expense, suggesting good debt service capacity.
