- **Check Line Thickness:** Ensure cut lines are set to a specific stroke width (often 0.001 inches or 0.025 mm) to signify cut paths.
- **Set Proper Line Colors:** Use distinct colors for different operations, e.g., red for cutting, blue for engraving.
- **Remove Unnecessary Elements:** Clean up stray points, unused layers, or hidden objects.
- **Convert Text to Curves:** To prevent font issues, convert all text to vector curves.
- **Adjust for Material Thickness:** Consider kerf (material removal by laser) to ensure accurate final dimensions.

Exporting CDR Files for Laser Cutting

Depending on your laser cutter's compatibility, you may need to export your CDR file into other formats:

- **DXF or DWG:** Widely accepted for CNC and laser cutters.
