Sample Nelson Pediatrics MCQs with Explanations

Sample Question 1

A 2-year-old child presents with persistent cough, wheezing, and shortness of breath. On examination, diffuse expiratory wheezes are heard. The child has a history of recurrent respiratory infections. Which is the most likely diagnosis?

- A) Cystic fibrosis
- B) Asthma
- C) Congenital lung malformation
- D) Foreign body aspiration

Correct Answer: B) Asthma

Explanation: The clinical picture suggests asthma, characterized by episodic wheezing, cough, and airflow limitation. Recurrent infections and diffuse wheezes support this diagnosis. Cystic fibrosis can cause recurrent infections but typically presents with failure to thrive and greasy stools. Foreign body tends to cause localized wheezing and sudden onset.

Sample Question 2

A neonate is diagnosed with hypoglycemia shortly after birth. The blood glucose level is 30 mg/dL. The infant has a high-pitched cry, jitteriness, and poor feeding. Which of the following is the most common cause?

- A) Maternal diabetes mellitus
- B) Congenital adrenal hyperplasia
- C) Inborn error of metabolism
- D) Birth asphyxia

Correct Answer: A) Maternal diabetes mellitus

Explanation: Neonatal hypoglycemia is common in infants of diabetic mothers due to hyperinsulinemia. Symptoms include jitteriness, poor feeding, and high-pitched cry. While other causes exist, maternal diabetes is the most common.
