Australian Standard AS 2670: An In-Depth Review of Fire Detection, Fire Alarm, and Emergency Warning System Standards

The Australian Standard AS 2670 is a cornerstone document in the realm of fire safety and emergency management within Australia. It provides comprehensive guidelines and requirements for the design, installation, and maintenance of fire detection, fire alarm, and emergency warning systems (FAEWS). As urban environments grow denser and the complexity of building infrastructures increases, adherence to AS 2670 ensures that safety systems are reliable, effective, and compliant with national safety standards. This article offers an in-depth analysis of AS 2670, exploring its scope, key components, practical applications, and the implications for stakeholders involved in fire safety.

Overview of Australian Standard AS 2670

Historical Context and Development

Australian Standard AS 2670 was first introduced to establish a uniform framework for fire detection and alarm systems across various building types in Australia. The standard has undergone several revisions to align with technological advancements, evolving safety protocols, and international best practices. Its development was driven by the need to minimize false alarms, ensure rapid detection

of fires, and facilitate effective evacuation procedures.

The current version reflects an integrated approach that combines technical specifications with practical safety considerations, ensuring that systems are both technologically robust and user-friendly.

Scope and Applicability

AS 2670 applies to a broad range of buildings and facilities, including:

- Commercial and office buildings
- Residential complexes
- Industrial facilities
- Healthcare facilities
- Educational institutions
- Public venues and entertainment complexes

The standard delineates requirements for the design, installation, commissioning, and ongoing maintenance of fire detection and alarm systems. Its scope extends to both conventional and addressable systems, covering various detection devices, alarm notification methods, and system integration parameters.

Core Components of AS 2670

Understanding the core components of AS 2670 is essential to appreciating how it shapes fire safety practices. These components outline the technical and operational benchmarks that systems must meet.

Detection Devices and Technologies

AS 2670 specifies multiple types of detection devices, each suited to different fire scenarios:

- Smoke Detectors: Use photoelectric or ionization sensors to detect smoke particles, with specific sensitivity settings to minimize false alarms.
- Heat Detectors: Detect rapid temperature increases or fixed temperature thresholds, suitable for environments where smoke detection may be impractical.
- Flame Detectors: Use infrared or ultraviolet sensors to identify visible or invisible flames, typically used in industrial or high-risk settings.
- Multi-sensor Detectors: Combine multiple detection methods to improve reliability and reduce

false alarms.

The standard emphasizes selecting appropriate detectors based on environmental conditions and risk profiles, ensuring both sensitivity and specificity.

Alarm Notification and Signaling

Effective communication during a fire event is critical. AS 2670 mandates:

- Audible and Visual Alerts: Alarm signals should be loud enough to be heard throughout the premises and include visual indicators (e.g., flashing lights) for the hearing-impaired.
- Voice Evacuation Systems: Use pre-recorded or live voice messages to guide occupants during evacuation, especially in complex or large-scale facilities.
- Integration with Building Management Systems (BMS): Allows centralized control and monitoring, facilitating prompt responses by emergency personnel.
