Question What are the most common causes of hepatitis worldwide? The most common causes include hepatitis B and C viruses, excessive alcohol consumption, and non-alcoholic fatty liver disease (NAFLD). **Answer** How is hepatitis B typically transmitted? Hepatitis B is primarily transmitted through contact with infected blood or body fluids, including sexual contact, sharing needles, or from mother to child during childbirth. What are the key features of non-alcoholic fatty liver disease (NAFLD)? NAFLD is characterized by excessive fat accumulation in the liver in individuals who consume little to no alcohol, often associated with obesity, insulin resistance, and metabolic syndrome. What role do liver enzymes play in diagnosing hepatology conditions? Liver enzymes

such as ALT and AST are indicators of hepatocellular injury; elevated levels suggest liver inflammation or damage, aiding in diagnosis and monitoring of liver diseases. How is chronic hepatitis C managed and treated? Chronic hepatitis C is managed with antiviral medications, particularly direct-acting antivirals (DAAs), which can cure the infection in most cases, reducing the risk of cirrhosis and hepatocellular carcinoma. What are the key features of cirrhosis and its complications? Cirrhosis involves advanced scarring of the liver tissue, leading to complications such as portal hypertension, variceal bleeding, hepatic encephalopathy, and increased risk of liver cancer. When should hepatocellular carcinoma screening be initiated in patients with liver disease? Screening for hepatocellular carcinoma should begin in patients with cirrhosis of any etiology, typically every six months using ultrasound with or without serum alpha-fetoprotein (AFP) testing. What are the main principles of managing autoimmune hepatitis? Management involves immunosuppressive therapy, primarily corticosteroids and azathioprine, to reduce liver inflammation and prevent progression to cirrhosis. How can hepatitis prevention be achieved on a public health level? Prevention strategies include vaccination (especially for hepatitis B), safe injection practices, screening blood products, harm reduction programs for intravenous drug users, and public education about transmission routes.
