Physiological Processes and Functions

Understanding how body systems operate involves exploring key physiological processes:

Cellular Metabolism

The sum of all chemical reactions in the body, including energy production, synthesis of molecules, and waste elimination.

Muscle Contraction and Movement

Involves nerve signals triggering muscle fibers to contract, enabling movement and posture.

Neural Transmission

Electrical signals travel along neurons, transmitting sensory information and coordinating responses.

Blood Circulation and Gas Exchange

The heart pumps blood through vessels, delivering oxygen and nutrients while removing wastes via the lungs.
